

Together for Implementation 🤝

This month as the world laid eyes on Egypt, Heads of State, ministers and negotiators, along with climate activists, gathered in Sharm el-Sheikh for the event of the year on climate action. Building on the outcomes and momentum of COP26 last year, countries have eventually [reached agreement](#) on establishing a long-awaited 'loss and damage' fund to assist those who are vulnerable to climate-induced disasters.

We are proud to witness Ampd Energy, a Hong Kong energy company, making its way to one of the 15 finalists in [Earthshot Prize](#) 2022. Designed to find and grow solutions in repairing the planet in this decade, the competition gathers entries under 5 categories: protect and restore nature, clean our air, revive our oceans, build a waste-free world and fix our climate.

Read on for more sustainability events and updates.
